Subject: NRTC recommendations for W-058 grass reseeding

----- Message Contents -----

The NRTC concurred via teleconference on 9/30/97 and subsequent meeting minutes that the sandberg blue grass secured through L&H for the replacement cross-site transfer line should be returned to Bectel to supplement their current revegetation needs.

Due to the poor condition of the neighboring understory adjacent to the corridor, future pipeline D&D and shortages of Bectel seed supply, the NRTC recommended use of our locally derived bluegrass at other site locations and application of crested wheatgrass (planted by drilling at a rate of 15#/A) to fully revegetate all sections of the corridor.

Please advise your FDH contractor as to the pathforward and keep me apprised of the planting time frame this fall. If you have questions, please call me.

Regards,
Bob
